ProM Data Objects

ProM Data Objects live in the ProM workspace
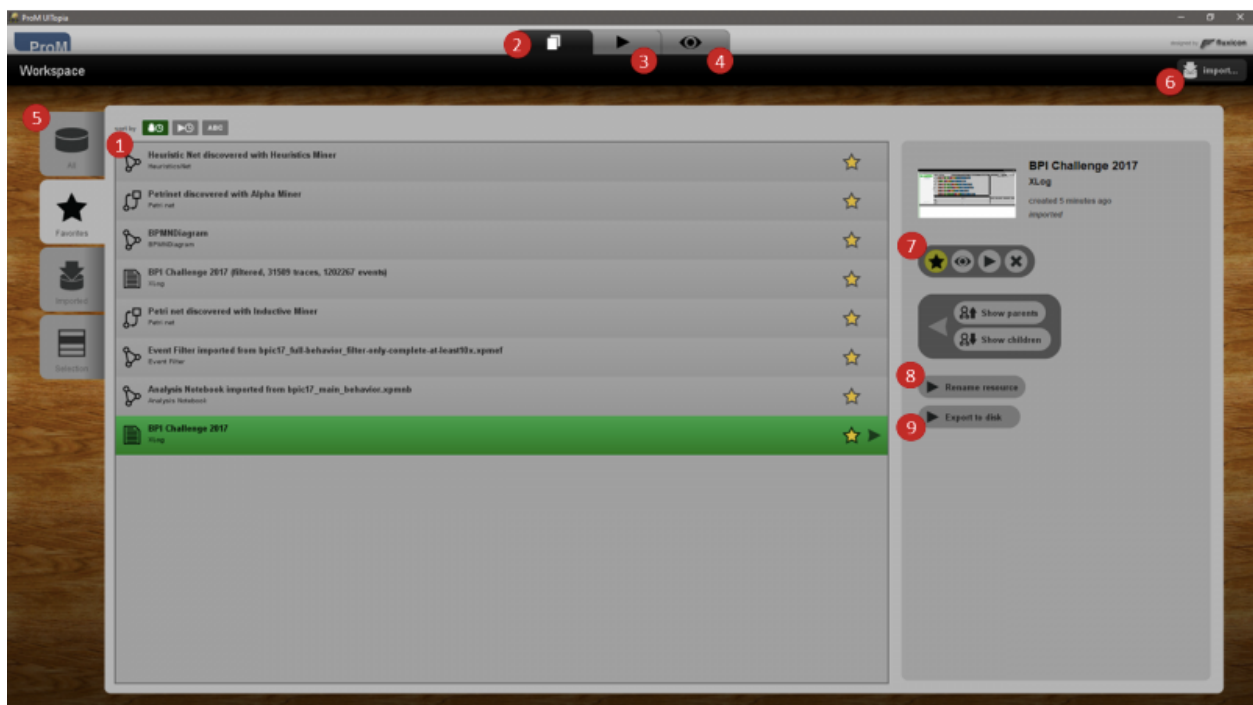

The Workspace has views for views for
- All objects,
- The favourite objects (marked with a start) and
- Imported objects

You can import new objects from files
- Via the import button or
- Via drag & drop

If you select an object in the workspace, you can
- Add it to the favorites in the workspace(Start button)
- View it which can open a Visualizers (View Button)
- Run a Plugin on it (run Button)
- Delete it
- Rename it
- Export it to file

ProM object types

Event logs
- Event Logs in XES Format
- CSV-event table, convert to XES format using Convert CSV to XES plugin

Process Models
ProM provides several types of process models

Petri Net
- Petri Net

Initial Marking object defines the initial marking of a petri net, needed for behavioral analysis and conformance checking.

Final Marking Objects defines the initial marking of petri net, needed for conformance checking.
